

ABSTRACT

A nonionic surfactant comprising an aliphatic alcohol
alkylene oxide adduct (A), directly produced by adding an
5 alkylene oxide (b1) to an aliphatic alcohol (a1),

and satisfying the following (i), (ii) and (iii):

(i) comprising one compound, or a mixture of two or more

(ii) having a ratio Mw/Mn within the specific range; and

10 (iii) having a distribution constant (c), determined by the
following equation (4), of 1.0 or less:

$$c = (v + n_o/n_{oo} - 1) / [\ln(n_{oo}/n_o) + n_o/n_{oo} - 1] \quad (4).$$

This invention provides an aliphatic alcohol alkylene
oxide adduct, having surface activities comparable to
15 alkylphenol-based nonionic surfactants and moreover having no
fear of environmental endocrine disrupters like
alkylphenol-based nonionic surfactants.

This invention provides a detergent composition using the
above anionic surfactant and having excellent detergency.
